Group name: Write your group name here
Names & Student IDs of members present and participating in the work:

1. Member Name 1 (21523xxx)
2. Member Name 1 (22523xxx)
3. Member Name 1 (22523xxx)
4. Member Name 1 (22523xxx)

OS & Endpoint Security Practices

There are four activities:

- 9.1.14 (Harden a Linux System),
- 9.1.16 (Recover Password),
- 10.1.13 (File and Data Integrity Checks),
- 10.1.15 (File and Data Encryption)

9.1.14 (Harden a Linux System)

Part 1: Install and Update Lynis.

Step 1: Determine the installed Lynis version.

Show your practice screenshots here.

Step 2: Install Lynis

Show your practice screenshots here.

Part 2: Examine the current version of Lynis.

Show your practice screenshots here.

Part 3: Run the Lynis tool.

Show your practice screenshots here.

Part 4: Review the results of your scan and address any warnings.

a. Scroll to the Results section in the output for your scan.

How many **Warnings** did you receive?

Write your answer here.

Provide screenshots as evidence of your answer.

How many **Suggestions** did you receive?

Write your answer here.

Provide screenshots as evidence of your answer.

b. You should address the warnings.

Pick at least one warning and research how to fix that problem. You can use the link in the warning output as a starting point for addressing a warning. However, you may also need to use your internet research skills to track additional information.

Which warning are you addressing?

Write your answer here.

What is your solution?

Write your answer here.

9.1.16 (Recover Password)

Part 2: Combine passwords and usernames into one text file.

Show your practice screenshots here.

Part 3: Run John the Ripper to recover the passwords.

Show your practice screenshots here.

Part 4: Change a user password to a stronger version and try to recover it.

Show your practice screenshots here.

10.1.13 (File and Data Integrity Checks)

Part 1: Recover Files after a Cyber Attack

Step 1: Access the BR Server from Mike's PC.

Show your practice screenshots here.

Step 2: Copy the hash values from the last time the files were archived.

Show your practice screenshots here.

Step 3: Download the backup files to Mike's PC.

Show your practice screenshots here.

Part 2: Use Hashing to Verify File Integrity

Step 1: Check the hashes on the client files on Mike's PC.

g. Are the two hash values for NEclients.txt the same?

Write your answer here.

Provide screenshots as evidence of your answer.

h. Which file has been tampered with and has an incorrect hash?

Write your answer here.

Provide screenshots as evidence of your answer.

Step 2: Escalate the cyber attack to Mike's supervisor, Sally.

Show your practice screenshots here.

Step 3: Download the suspected file to Sally's PC.

Show your practice screenshots here.

Part 3: Use HMAC to Verify File Integrity

What is the computed HMAC for the contents of the file?

Write your answer here.

Provide screenshots as evidence of your answer.

How is using HMAC more secure than general hashing?

Tulis hasil diskusi kelompok Anda di sini.

Does the HMAC hash for the income.txt file match the original hash you copied to the text file on the CSE-LABVM?

Write your answer here.

Provide screenshots as evidence of your answer.

10.1.15 (File and Data Encryption)

Part 1: Discover the FTP Account Credentials for Mary

Step 1: Access the text document on Mary's Laptop.

Show your practice screenshots here.

Step 2: Decrypt Mary’s FTP account information.

What is the username and password for Mary’s FTP account?

Write your answer here.

Provide screenshots as evidence of your answer.

Part 2: Upload Confidential Data using FTP

Step 1: View the confidential document on Laptop BR-1

What form is the data in?

Write your answer here.

Provide screenshots as evidence of your answer.

Step 2: Connect to the BR Server.

Show your practice screenshots here.

Step 3: Upload a file to the FTP server.

Show your practice screenshots here.

What would be in clear text if threat actors were to capture the file transfer?

Write your answer here.

Part 3: Discover the FTP Account Credentials for Bob

Step 1: Access the text document on Bob's Laptop.

Show your practice screenshots here.

Step 2: Decrypt Bob’s FTP account information.

What is the username and password for Bob’s FTP account?

Write your answer here.

Provide screenshots as evidence of your answer.

Part 4: Download Confidential Data using FTP

Step 1: Connect to the BR Server.

Show your practice screenshots here.

Step 2: Download the file to Bob’s PC.

What would be in clear text if threat actors were to capture the file transfer crossing the internet?

Write your answer here.

Part 5: Decrypt the Contents of a Sensitive File

Step 1: Get the decryption key.

What is the decryption key to access the confidential information in the clientinfo.enc file?

Write your answer here.

Provide screenshots as evidence of your answer.

Step 2: Decrypt the contents of the clientinfo.enc file.

What is the first name listed in the clientinfo.txt file?

Write your answer here.

Provide screenshots as evidence of your answer.

Activity Reflection

What did you learn from this activity?

Write down what your group discussed.

What are you still confused about?

What do you still need clarification on?

Write down what your group discussed.

Group Work Evidence

If you worked together in person, please attach a photo.
If you worked together online, please attach a screenshot.
